Interphone - the 'must have' Bluetooth helmet communicator

Whether you're new to motorcycling, an experienced long-distance tourer, or a 'born again' sportsbiker, you will have wondered from time to time about the possibilities of communicating with others whilst on the move.

Wired intercoms have been available for many years, and can provide effective rider-to-pillion interaction. The more sophisticated versions can also attach to mobile phones and radios, providing longer-range communication. The downside is the nuisance, complexity, and potential unreliability of all of those plugs and sockets, especially when exposed to the elements and rough handling on a motorcycle, plus the extra cost of interface cables.

Imagine if you could achieve all of this with a self-contained wireless unit that simply attaches to any kind of helmet in minutes and gives fantastic audio performance. Through the technical mystery of 'Bluetooth' this is now possible.

'Interphone' is now available in the UK. Based on a specification for **'the world's best motorcycle intercom'**, in partnership with 'Cellularline', a major producer of mobile phone accessories, **Interphone** is the world's first wireless intercom with all these features:

- ⊛ Bluetooth® Wireless Technology (secure, one-to-one, encrypted channels)
- ⊛ Hands-free Phone Operation - using voice dialling capability of phone
- ⊛ Voice Activation of Phone - for answering on the move
- ⊛ Wireless Intercom - Rider-Pillion or Bike-to-Bike (typically over 150 metres, up to 500 metres)
- ⊛ GPS compatible - listen to your GPS directions
- ⊛ Full-duplex communication with DSP and noise filtering - natural 2-way conversation

1 Bluetooth® Module

2 Multi-function Button

On/Off - pairing - answer - call
 Voice dial - end call - reject call
 Hands-free/Intercom switch

3 Volume Up/Down

4 Multi-function LED

Shows Operation Mode & Battery Level

5 Ultra-slim Speaker

6 Microphone on Flexible Boom

with foam windscreen

7 Mounting Bracket/Clip

- ⊛ Microphone with anti-wind & anti-noise filter
- ⊛ Automatic volume control - according to speed and background noise
- ⊛ 'Turbo' setting - for noisy applications
- ⊛ Excellent performance to over 70 mph
- ⊛ Waterproof
- ⊛ Rechargeable Lithium battery - giving up to 7 hours talk time (charger included)
- ⊛ 12 Month 'no-quibble' Warranty
- ⊛ 2 mounting brackets - to suit any helmet

And, whilst we don't endorse the use of a mobile phone when riding, it's astonishingly useful to be able to stop to make a quick call without having to remove helmet and gloves.

The benefits of a full-duplex wireless intercom to your pillion are pretty obvious, but the facility to clearly warn your riding buddy about a road hazard or that you're lost or need petrol is a real boon.

Interphone now provides a solution for those who thought motorcycle intercoms were a nuisance and a waste of time:

- ⊛ city commuters - who need access to their phone
- ⊛ despatch riders - access to phone & GPS info
- ⊛ sportsbike riders - can now chat to each other on the move, hassle-free
- ⊛ advanced instruction - secure private channel (no one else can hear the criticism...)
- ⊛ track day enthusiasts - ideal for one-to-one coaching (even does 'ship-to-shore')
- ⊛ trail riders - incredibly useful for navigation and hazard warning
- ⊛ adventure tourers - it's even been used on the Touareg Rally in Morocco, and found to be 'indispensable' (Nick Plumb)

At £149.99 each (or £275 for a pair) 'Interphone' is available from all good dealers, or online at www.nitro-helmets.com and www.ogk-shop.com
